Abstract (en)

[origin: WO2020030211A1] The invention relates to a container for storing a powder mixture during heat treatment in a furnace. The invention further relates to a furnace and to a method for heat treatment of a powder mixture. The aim of the invention is to specify a container by means of which in particular the throughput per unit of time can be increased and an automatic removal of the container is simplified. This aim is achieved, according to the invention, by a plurality of receptacles for releasable fastening of spacers which in the installed state allow contactless stacking of a plurality of containers one above the other.
