Abstract (en)

[origin: KR20200019058A] The present disclosure relates to a 5th generation (5G) or pre-5G communication system for supporting a higher data transmission rate than a 4th generation (4G) communication system such as long term evolution (LTE). According to various embodiments of the present disclosure, a method for operating a base station in a wireless communication system comprises the processes of: receiving information on a terminal residence time and a transmission time of an uplink frame from a terminal; determining a wireless access network residence time on the basis of the transmission time of the uplink frame; and transmitting the wireless access network residence time and the terminal residence time to a user plane function (UPF).
