Abstract (en)
[origin: CN113017474A] The invention relates to a cleaning head (2) comprising: a body; a cleaning element (11) detachably mounted in the accommodating housing (9) of the main body; a locking member comprising: a locking portion (25) movable between a locking position, in which the locking portion (25) cooperates with a locking element provided on the cleaning element (11) to prevent the cleaning element (11) from moving out of the containing housing, and a release position, in which the locking portion (25) releases the locking element to allow the cleaning element (11) to move out; and a control portion movable between an inactive position and an active position, said locking member being configured such that movement of the control portion from the inactive position to the active position causes movement of the locking portion (25) from the locking position to the release position.
