Abstract (en)

A grip assembly for an item of sporting equipment. The grip assembly is built around a core that is an elongated tubular body dimensioned for mounting on a grip mounting portion of the sporting equipment. The tubular body is formed with a three dimensional open structure located between an inner and an outer wall. The outer surface of the outer wall can also be equipped with a sleeve or other cover to facilitate the grip of a user. Sensors and transmission equipment located within the grip structure can be used to transmit data on forces that the grip is being subjected to, to reception equipment located for convenient viewing by a user.
