Abstract (en)

[origin: EP3835017A1] The invention relates to a device for classifying slices by processing images captured at high speed during the cutting of food in the shape of bars, such as, for example, sausage, ham or cheese, after which portions are formed which fall or are in stacks and between which a plastic sheet may or may not be inserted. The invention also comprises the method used for classifying these images, with the aim of being able to detect failures in quality in the product before the packaging thereof.
