Abstract (en)
An air management device may include three independently operated primary impellers 131, 131', 131'', and drawn-in air is discharged through discharge ports 15-1, 15'-2, 15'-3 provided in the front plate 15 of the housing 10. Louvers 141, 142, 143 installed downstream of the air flow and discharge ports 15'-1, 15'-2, 15'-3 may be independently opened or closed to provide discharge of the air to the surrounding environment. Further, at least one retractable or pop-up fan 200, 200' may be provided. A first retractable fan 200 and/or a second retractable fan 200' may send air to a farther area through the discharge vents of a first pop-up duct 234 and a second pop-up duct 234', which may protrude from both ends of the upper surface of the housing. The first and second pop-up ducts 234, 234' may be installed to be elevated and rotatable in first and second vertical flow path 210, 210' of first and second vertical ducts 208, 208' in the housing 10. The air management allows customization of air flow.
