Abstract (en)  
[origin: KR102256417B1] The present invention relates to a dial mounted on a watch case. The dial comprises a plate made of brittle materials. The plate regulates a horizontal flat surface, and includes one or more housings. The one or more housings regulate an attachment point for one or more feet composed of a mainframe and a head placed in the one or more housings. The head of the feet includes circular slots placed to accommodate ring-shaped elements made of shape memory alloy which allows the feet to be moved to a rest position maintained mechanically in the housing from a position withdrawn in which the ring-shaped elements are put on the slots. The present invention aims to provide a dial made of non-conductive material with feet, which eliminates the need to make the plate made of brittle material thicker.

Abstract (fr)  
L'invention concerne un cadran destiné à être monté dans une boîte de montre, le cadran comprenant un plaque réalisée dans un matériau fragile, ladite plaque définissant un plan horizontal et comprenant au moins un logement définissant un point d'assemblage pour au moins un pied formé d'un corps et d'une tête agencée pour reposer dans ledit logement, caractérisé en ce que le pied comprend sur sa tête une gorge circulaire agencée pour recevoir un jonc réalisé dans un alliage à mémoire de forme apte à passer d'une position rétractée à une position de repos dans laquelle le pied est maintenu mécaniquement dans ledit logement.
