Abstract (en)
A privately owned communication terminal is enabled to be used as a shopping assistance device in a shopping assistance system introduced at a plurality of stores, without requiring complicated setup work on the communication terminal. The shopping assistance device accepts an entry operation to one store and acquires entry store identification information identifying the store and setup information associated with the identified. The device stores the entry store identification information and the setup information that are acquired. The device accepts an exit operation from one store and acquire exit store identification information identifying the store. The device clears the entry store identification information and the stored setup information, when the exit store identification information matches the entry store identification information.
