Abstract (en)

[origin: EP3836587A1] Provided is a mechanism capable of reducing a burden on a beam selection procedure on a plurality of frequency bandwidths. A communication device includes: a setting section (151) that performs setting of beam groups defined in a plurality of frequency bandwidths, respectively; and a notification section (153) that notifies a terminal device of information regarding identicalness between the beam groups defined in the frequency bandwidths different from each other.
