Abstract (en)

[origin: WO2020223876A1] A heater assembly (20) is configured to vaporize a liquid. The heater assembly (20) includes a substrate plate (26,28) and a heating element (24) supported on the substrate plate (26,28). The heating element (24) includes a layer of electrically conducting material. The heater assembly (20) further includes a plurality of channels (46) formed by the electrically conducting material. Each of the plurality of channels (46) is configured to operate in parallel. Each channel (46) has an inlet end and an outlet end. The inlet end is configured to receive the liquid and the outlet end is configured to discharge vapor. The substrate plate (26,28) and the heating element (24) form a multi-layer configuration.
