Abstract (en)

[origin: WO2020035116A1] The invention relates to a pressing device (1; 1'; 1") for applying a compressive force (F) to products (400) of a product display device (200). The pressing device (1; 1'; 1") comprises a pressing part (2) for transferring the compressive force (F) to the products (400). The pressing device (1; 1'; 1") also comprises a mass body (M1; M2), which has a predefined mass, in order to apply a defined weight force, which brings about the compressive force (F). Furthermore, the pressing device (1; 1'; 1") comprises a support part (6; 6'; 6"; 6""), which supports the mass body (M1; M2) and which is designed to be movably connected to an inclined surface (40) supporting the products (400) in order to allow movement of the pressing device (1; 1'; 1"; 1") along the inclined surface (40). The invention also relates to an assembly, comprising: a shelf element (50; 50'), which has a supporting surface (55) for products (400); and a pressing device (1; 1'; 1") for applying a compressive force (F) to the products (400). The invention further relates to a shelf unit (100; 100'; 100"), to a product display device (200), to a use of a dimensionally stable transport and/or storage container, to a use of a pourable and/or flowable material, to a use of a construction material containing cement, to a method for producing a pressing device (1"), and to an extruded plastic profiled element for producing the support part (6; 6'; 6"; 6"") of a pressing device (1; 1'; 1"; 1").
