Abstract (en)
[origin: WO2020035431A1] The invention concerns a transport trolley (24) for a demountable bed, in particular a medical bed. The bed comprises a frame (16), a bed base comprising two sections, and a system for adjusting the height position of the bed base with respect to the frame. The transport trolley (24) comprises a base structure (240) mounted to pivot with respect to the frame (16) from a use position of the bed to a storage position of the bed. The transport trolley (24) comprises two pairs of folding pins (241, 242) arranged on the base structure (240). The sections of the bed base comprise, at one of their ends, means for receiving the pairs of pins so as to keep said sections connected at right angles to the base structure (240), parallel to the frame (16) in the storage position. The base structure comprises means for adjusting the spacing of the pins (38, 39, 40, 41) according to at least two connecting positions, preferably three connecting positions.
