Abstract (en)
[origin: CA3109620A1] The subject invention comprises a system, and method of using the system, for providing improved alignment in multiple settings. Appropriate settings include woodworking, machining, and sports, although there are several other practical applications for this technology. The invention employs one or more alignment stations that have a base plate that anchors into a flat surface, guides that fit into the base plate, a top rotating element that fits onto the base plate and secures the first set of guides into place, and a positional lock that locks the rotating element into place relative to the base plate.
