Abstract (en)
[origin: WO2020064421A1] The invention relates to a driving device (1) for a ship (2), which driving device has a pod housing (3) and a shaft (4), the pod housing (3) being fastenable by means of the shaft (4) to a hull (5) of the ship (35), and the pod housing (3) being provided to accommodate an electric motor (6). The electric motor (6) is provided for driving a propeller (7), the driving device (1) having a first support structure (8) and a second support structure (9), the first support structure (8) being wider than the second support structure (9). In a method for operating the driving device (1), a flow speed is generated which reduces a throughflow of water through openings (22, 23, 26, 27).
