Abstract (en)

[origin: WO2020035801A1] The invention relates to a device (100) for braking a conductor. The device (100) comprises a braking element (10), which is able to be put into an operative connection with a conductor guided in a conveying direction in the device (100), and a contact pressure element (20), which is able to put into an operative connection with the conductor guided in the device (100). The contact pressure element (20) is arranged opposite the braking element (10) and these are movable relative to one another. The contact pressure element (20) is arranged on a brake lever (30) mounted in a pivotable manner on a pivot pin (31). Furthermore, the invention relates to a method for braking the conductor and to a cable processing machine having the device (100).
