Abstract (en)

[origin: WO2020035235A1] What is proposed is a connecting element (1) for fastening a sink (10) to a worktop (20), which worktop (20) has a cutout (21) for inserting the sink (10), which cutout (21) has a peripheral boundary surface (22), which connecting element (1) has: a basic body (2) serving as a bearing part for bearing against the sink (10); at least one spring part (3.1-3.8) which projects from the basic body (2) on a first side and which is designed, under loading in the direction of the basic body (2), to produce a spring force which acts away from the basic body (2); and at least one anchoring part which projects from the basic body (2) on a second side thereof situated opposite to the first side and which is designed to engage in a slot-shaped recess (15) in the sink (10); wherein an engagement direction of the anchoring part extends substantially approximately antiparallel to a direction of the spring force. .
