Abstract (en)  
[origin: WO2020035174A1] The invention relates to an assembly (1) having two burners (10), which has a common exhaust gas guiding device (2) and a common feed device (3) for combustion air. A return-flow barrier (4) blocks the flow of a gaseous medium in a flow direction and is arranged in the exhaust gas guiding device (2) or in the feed device (3). The return-flow barrier (4) has an opening (40) and a movable element (41), which is movable between two positions. The opening (40) is opened if the movable element (41) is in one of the two positions, and is closed if the movable element (41) is in another of the two positions.
