Abstract (en)

The present disclosure relates to an aerosol delivery device and system e.g. a smoking substitute device and system. In particular an aerosol delivery device, comprising: an inhalation sensor, configured to detect a user inhaling through a mouthpiece of the aerosol delivery device; a visual feedback element, configured to provide visual feedback; and a controller, connected to the inhalation sensor and visual feedback element, and configured to gradually change the intensity of the visual feedback element, when the inhalation sensor detects a user inhalation, over a duration of the user inhalation.
