Abstract (en)

[origin: WO2021123168A1] The invention proceeds from a mouth protection device for a respiratory protection system (10a), in particular a blower-type respiratory protection system, having at least one mask main body (16a), which is provided to cover part of the mouth and/or nose of a user (18a) and which at least partially delimits a breathing region (20a), and having at least one respiratory air supply line (22a), which is connected to the mask main body (16a) and which delimits at least one respiratory air channel (24a), which opens into the breathing region (20a) and which is provided to guide an active respiratory air flow (26a; 26b). It is proposed that the mask main body (16a) is made at least to a large extent of a pliable material, wherein the mask main body (16a) is made at least to a large extent of a textile material.
