Abstract (en)
The invention relates to a machine (1) and method for the finishing treatment of a textile web (100), comprising first and second accumulation chambers (4, 6) with first and second take-up areas (8, 10). Said machine (1) also comprises a conveyance duct (12) extending between first and second ends (14, 16) and communicating the first and second chambers (4, 6) with one another. The duct (12) furthermore has first and second gas inlets (22, 24). The first gas inlet (22) is provided inside the duct (12), at the first end (14) and in a position adjacent to the first chamber (4). The second gas inlet (24) is provided inside the duct (12), at the opposite second end (16) and adjacent to the second chamber (6) so as to move the textile web in an alternating manner between the first and second chambers and make it impact at least one impact element (2, 36, 38).
