Abstract (en)
[origin: WO2020038656A1] The invention relates to a multilayer composite film made of plastic as a surface coating for an object, which composite film is at least partially light-permeable, i.e. in some portions, and comprises at least one outer light-permeable cover layer, optionally provided with a light-permeable lacquer, and also comprises, on the rear face of the cover layer, one or more additional light-permeable plastic layers and a light-permeable backing layer. An opaque layer, which is designed as a planar mask or screen provided with openings and is only light-permeable in the openings in the mask or screen, is arranged within the layer composite. The opaque layer adjoins the rear face of the cover layer in the direction of the support layer. The base material of the opaque layer is the same as that of the cover layer.
