Abstract (en)
[origin: WO2020038935A1] The invention relates to a composition precursor comprising a three-dimensional network consisting of partially cross-linked monomer units and an alkoxy-terminated oligo- or polysiloxane, wherein the monomer units comprise at least one trialkoxysilane and at least one dialkoxysilane. The invention further relates to a composition, to a method for producing a composition precursor and to a composition, to a use of a composition and to a component.
