Abstract (en)

[origin: WO2017174151A1] The invention relates to a receptacle (1), in particular a storage box, which comprises a base body (5) and a removable cover element (7). The cover element (7) is adapted to cover an open top side of the base body (5). The base body (5) comprises a bottom wall, a front wall (25), a rear wall (11) and two side walls (27, 27') arranged oppositely to each other. The cover element (7) comprises at least a first wall (14) serving as a top wall of the receptacle (1) when the cover element (7) covers the base body (5) and a second wall (15) arranged orthogonally to the first wall (14). The second wall (15) overlaps at least partially one of the front wall (25), the rear wall (11) and the side walls (27, 27') when the cover element (7) covers the base body (5), so that a first edge of the second wall (15) arranged distantly from the first wall (14) faces the outer surface (25a) of the respective wall (25) of the base body. According to the present invention, the second wall (15) of the cover element (7) comprises a zone at least in the area of the first edge which is composed of a flexible material, the zone in particular being a soft lip (23) which is fixed to a portion of the second wall (15) composed of a rigid material.
