Abstract (en)

[origin: EP3842167A1] The invention discloses a mold string conveyor (1) having a mold extraction device. The mold string conveyor (1) is configured for providing support for a mold string (300) while stepwise displacing said mold string (300) forward along a displacement path. The mold extraction device further comprises an inferior trapdoor (2) provided along the displacement path between a first stretch (11) and an adjacent, second stretch (12) of said mold string conveyor (1). The trapdoor (2) may comprise a hinged plate (21) that opens downwards, such that any mold (310) resting on the plate (21) when in the horizontal position will fall down below the conveyor (1).
