Abstract (en)
The present invention provides a denesting apparatus (100), the apparatus comprising:- one or more closed loop conveying tracks (130, 230), each closed loop conveying track comprising a plurality of sets of one or more de-stacking means movingly configured thereon through one or more de-stacking means moving mechanism;- one or more stacking magazines (120, 220), each adapted to hold a stack of sheets (110, 210) supported thereon;wherein each of the plurality of sets of de-stacking means (240) is adapted to selectively engage an uppermost sheet from at least one of the stacking magazines in any desired order either sequentially and/or simultaneously so as to discharge the picked-up sheets onto an out-feed conveyor in any desired manner either one besides another or otherwise one overlapping the other.
