Abstract (en)

This application provides a method for reporting a measurement result of interference measurement, to implement interference management performed by a parent node on a child node in an IAB system. The method includes: performing, by a second node, interference measurement to obtain one or more measurement results, where the interference measurement includes interference measurement in a first mode and/or interference measurement in a second mode, the interference measurement in the first mode includes that the second node receives a reference signal sent by a first node and a signal sent by a third node, to perform the interference measurement, the interference measurement in the second mode includes that the second node receives the reference signal sent by the first node, to perform the interference measurement, the first node is a parent node of the second node, and the third node is a child node of the second node; and sending, by the second node, an uplink signal to the first node, where the uplink signal includes the one or more measurement results, the uplink signal includes an indication field, and the indication field is used to indicate a mode of interference measurement corresponding to each of the one or more measurement results.
