Abstract (en)  
[origin: WO2020043680A2] The invention relates to a device for machining workpieces, which is preferably intended for use in a handling system, comprising at least one rotary drive unit (26) which is guided in a device housing (2) in a longitudinally movable manner, said rotary drive unit rotatably driving a cutting tool (100), and comprising a feed drive unit (32, 60) which moves the rotary drive unit (26) from a rear non-processing position into a front working position and vice versa.
