Abstract (en)

[origin: WO2020043431A1] The invention relates to a machining device (1) for machining a rail (2) comprising an energy supply unit (6) for providing energy and a machining unit (7) which can be operated by means of the provided energy. The energy supply unit (6) and the machining unit (7) are separate from each other. The machining unit (7) can thus be operated spatially separately from the energy supply unit (6), allowing user-friendly, flexible and safe machining of the rail (2).
