Abstract (en)
  Disclosed is a method of determining a cover position of a camera unit in a security system, the security system comprising one or more control hubs which receive data from and/or transmit commands to the camera unit, the camera unit comprising:a camera having a lens for receiving light from a field of view, FOV; a cover which is movable from an open position in which the lens is exposed, to a closed position in which the lens is covered, the method comprising: receiving, at the camera unit, a cover position status request from the control hub; and, determining the cover position status in response to receiving the cover position status request.
