Abstract (en)

[origin: WO2020049242A1] The invention relates to a device (1) with a belt (4) for carrying an electronic apparatus (2) over the shoulder against the chest (3) of a user. The device comprises, in particular, a support (5) with a strap for the electronic apparatus. The belt of the device has two ends (4') between which the strap support is attached along its length in order to form the shoulder strap. The strap support has a first face (5') orientated on the chest side when the belt is worn over the shoulder and a second face (5''), opposite the first face, said second face comprising attachment means designed to fasten the second face flat against the electronic device.
