Abstract (en)
[origin: WO2021104641A1] The present invention relates to a sitting device, comprising: an ellipsoidal hollow body (2), which is filled with a gaseous medium and has an expandable hollow body wall; and a casing (1), which encloses the hollow body (2) and is made of flexible material. The casing (1) can be pulled onto the hollow body (2) and pulled off same. The sitting device further comprises a weight body (3) used for positional alignment. The weight body (3) is fastened in a clamping manner between the hollow body (2) and the casing (1) because of a compressive force acting between the hollow body (2) and the casing (1). Furthermore, the present invention relates to a weight body (3) for use in a sitting device according to the invention.
