Abstract (en)

[origin: WO2021101519A1] The present system and method are useful for the removal of immune inhibitors such as soluble TNF receptors from the body fluid of cancer patients. In some embodiments, soluble TNF-Receptors 1 and 2 are selectively removed from plasma at 80% or more efficiency. In some embodiments, the system includes an immobilized capture ligand of a single chain TNF alpha. The system and method are useful for the treatment of different cancer types, stages and severity.
