Abstract (en)
[origin: WO2020048644A1] The invention relates to an apparatus for producing concrete blocks (19), in particular concrete paving blocks, having a mould (12) to be filled with a concrete mixture, the mould (12) having at least one mould cavity for receiving the concrete mixture, and the upwardly open mould cavity having walls (13, 14, 15, 16) as lateral boundaries, and the at least one mould cavity (17) being fillable with the concrete mixture by means of a filling device, and the mould (12) with the at least one mould cavity (17) and the filling device being movable relative to one another along a filling axis (18). According to the invention, the filling axis (18) is oriented at an incline to an axis of symmetry of the at least one mould cavity (17) so that preferably all walls (13...16) of the mould cavity (17) extend neither perpendicular nor parallel to the filling axis (18), but instead at an angle (22) thereto.
