Abstract (en)  
[origin: WO2020057762A1] The invention relates to a device (100) for forming a plastic component, which device has a body (110) which is suitable for use in a device for producing a plastic component from a first compound, and which is formed in such a way that, when used in the device for producing plastic components, by being guided past the body (110), the first compound is brought into a form which has at least one cavity which is continuous in the direction of the guiding past. The device (100) additionally has a line system (120) arranged in the body (110), through which a second compound can be expelled from an end (112) of the body (110), in order to introduce a second compound into the cavity while the first compound is guided past the body (110).
