Abstract (en)
[origin: WO2020048686A1] The present invention relates to a gas cooker (1) comprising a burner plate (3) which has at least one opening thereon; a body (4) which defines a volume under the burner plate (3) wherein the pipes carrying the gas, the electrical components and connections are arranged; at least one tap (5) which is fixed into the body (4) and which provides the flow of gas; at least one shaft (6) which is disposed on the tap (5) and which provides the adjustment of the amount of the gas passing through the tap (5); and at least one knob (7) with one end connected to the shaft (6), which enables the shaft (6) to be moved to adjust the amount of the gas passing through the tap (5), wherein at least one connection element (8) is fixed onto the tap (5), and at least one fixing element (9) is mounted onto the connection element (8) such that the shaft (6) passes through the fixing element (9), thus at least partially limiting the wobbling right and left of the shaft (6) due to the movement transferred by the knob (7).
