Abstract (en)

[origin: WO2021139978A1] The invention relates to a method for creating a foundation element in the ground, wherein a hole is created in the ground and a curable mass is introduced into the hole, which mass cures to form the foundation element. According to the invention, an insert body is inserted approximately centrally into the hole, which insert body is spaced apart from a peripheral wall of the hole, wherein an annular gap is formed between the peripheral wall of the hole and the insert body, and a curable mass is introduced into the annular gap, which curable mass cures to form an annular foundation element.
