Abstract (en)

A method and system for managing engineering workflows in a cloud computing environment is disclosed. The method includes receiving a request for performing an engineering process in an engineering project associated with a technical installation. The method further includes determining one or more engineering objects required for performing the engineering process based on the received request. Further, the method includes generating an engineering workflow for performing the engineering process in the engineering project based on the determined one or more engineering objects. The engineering workflow represents at least a portion of the engineering process. The engineering workflow comprises one or more connections between the one or more engineering objects. Also, the method includes generating a modified engineering project based on the generated engineering workflow by performing the engineering process in the engineering project on a visual platform. Additionally, the method includes outputting the generated engineering workflow and the modified engineering project on a graphical user interface.
