Abstract (en)

[origin: WO2020053212A1] The invention relates to a system for analysing fluids originating from the body, having a volume through which the fluid is passed, more particularly having a fluid line (4, 5, 6, 306, 307, 308) and/or a fluid storage volume (1, 2), and having a sensor unit (100, 200) which is integrated in the system and is or can be connected to the volume to detect at least one analyte in the fluid and/or at least one parameter of the fluid, wherein the sensor unit has a test strip (100, 200) having at least one test field (101 - 111), which changes colour in the presence of an analyte to be detected and/or subject to a fluid parameter to be detected.
