Abstract (en)
[origin: WO2020052701A1] The invention relates to a bicycle for the transport of loads and individuals, wherein the rear wheel is arranged at a first distance from the front wheel, and wherein the bicycle is designed to be length-adjustable, in that the front wheel and/or the rear wheel can be changed from a first position to a second position, such that in a second position the rear wheel and the front wheel are arranged at a second distance from each other, wherein the second distance is greater than the first distance, and wherein the bicycle is ready to ride or can be ridden both in the first distance and in the second distance of front wheel and rear wheel.
