Abstract (en)
[origin: WO2021047710A1] The invention relates to a stackable transport and storage container, which consists at least of a bottom, two side walls and two end-face walls, and inner partitions and/or a container cover. The problem addressed by the invention is that of proposing a transport and storage container in which inner partitions and/or a container cover can be detachably fastened to the container without the aid of tools and additional fastening elements. The intention is that the container is restricted or narrowed by as few projections and protrusions as possible. The production and assembly should be possible with little outlay. In the storage and transport container, the side walls (2) and the end-face walls (3) comprise folded-over edges (10), above which stacking profiles (9) which are open at the bottom can be placed. The connecting piece of the stacking profile (9), which piece forms the stacking support (20), has profiling in the form of a keder holder (12) into which a pull-in keder (13), having a keder core (15) and a keder flap (14), can be inserted. Partitions (17) for receiving transport and storage parts and/or the protective cover (16) are fastened to at least one keder flap (14).
