Abstract (en)

[origin: WO2020052833A1] The invention relates to a forming section of a machine for producing a fibrous web, comprising at least one first paper machine clothing and at least one suction box, wherein the suction box comprises a suction zone and a first strip, which is in frictional contact with the first paper machine clothing, characterized in that the forming section has means for determining a friction characteristic value for the friction of the first paper machine clothing and the first strip. The invention further relates to an operating method and to a computer program product.
