Abstract (en)
[origin: WO2020053047A1] The present invention relates to a construction element (10) comprising a frame (1) and a block (2) slidable in the frame (1) when subjected to an external force. The block (2) can thus form a tenon between two superimposed frames (1) forming mortises. Construction elements (10) fixed together laterally form modules (100) which can be assembled in offset from one level to another so as to form a wall.
