Abstract (en)

[origin: KR20200079153A] Provided is an electronic device which prevents a deformed shape from appearing on a window surface of a display even when a support layer attached to the display is deformed by an external force. The electronic device comprises: a housing including a front plate facing a first direction, a rear plate facing a second direction opposite to the first direction, and a lateral member surrounding a space between the front plate and the rear plate; a display configured to be seen through at least a portion of the front plate, and including a first surface facing the first direction, and a second surface facing the second direction; a middle plate disposed between the display and the rear plate, and including a third surface facing the second surface of the display, and a recess formed on the third surface; an adhesive layer attached to the second surface of the display and including a fourth surface facing the first direction and a fifth surface facing the second direction; a coating layer formed on the fifth surface of the adhesive layer and disposed on a first region overlapping the recess when viewed from the top of the display; and a support layer disposed between the adhesive layer and the middle plate. Various other embodiments are possible.
