Abstract (en)

[origin: WO2020053437A1] The invention relates to a pin of an electrical connector, comprising a connecting section for connection to the connector and a free end section, the end section having a cross-section with at least one portion curved around an axis parallel to a longitudinal direction of the end section, and the end section having lateral edges forming electrical contact portions that can be brought closer to each other by generating an elastic deformation of the curved portion.
