Abstract (en)
Cap-adjusting accessory for caps with a rear cut-out in the shape of an inverted "U", from the bottom ends (2-2') of which extend a male band (1) provided with a plurality of prongs (4), distributed linearly and equidistant from one another, and a female band (3) comprising a plurality of holes (5) distributed linearly and also equidistant from one another. The accessory is formed from an elongated laminar body (6) having a plurality of prongs (4') distributed linearly and with the same spacing therebetween as that of the male band (1) of the closure system, a plurality of holes (5') being provided between said prongs, which are distributed linearly and also equidistant from one another.
