Abstract (en)

[origin: EP3851397A1] The object of the invention is a container, in particular intended for medicines made of two substances, separated from each other, and which require combining just before their use. The container, in particular for medicines, according to the invention, is preferably made in the form of a bottle (1), whose threaded neck (2) is closed with a threaded cap (3), made of an internally threaded cylinder (4) closed with a cover (5). The container is characterised in that the cover (5) has a circular cut-out in which another cylindrical container (6) is placed, enclosed from the bottom with a film (7), and which on the outer surface has two rings (8, 9) between which the cover (5) of the cap (3) is placed, while a punch (11) is attached to the top wall (10) of the cylindrical container (6) from the inside.
