Abstract (en)

The present invention relates to an adjustable valve for an air duct for forced or unforced ventilation of a home and the like. The valve comprises a stator having an annular stator element adapted to be retained in said air duct, an outer rotor part provided in the space defined by the annular stator element, and an inner rotor part enclosed in the space between, and connected to, the stator and the outer rotor part. The valve is further adapted to adjust the axial position of the inner rotor part relative to the outer rotor part in discrete steps when the outer rotor part is turned.
