Abstract (en)
The present invention relates to a cooling device (1) wherein the air is homogeneously distributed in the freezing compartment (2). The cooling device (1) comprises a freezing compartment (2) wherein the foodstuffs to be frozen are placed; an evaporator (3); a fan (4) which blows the air around the evaporator (3) into the freezing compartment (2); at least one freezing compartment wall (5) which separates the evaporator (3) and the inner volume of the freezing compartment (2); and a first opening (6) which is provided on the freezing compartment wall (5) so as to be aligned with the fan (4) and which enables the air blown by the fan (4) to be delivered into the freezing compartment (2).
