Abstract (en)

[origin: WO2020030791A1] The device (1) comprises a food support (G); a hollow body (C) having a lower portion (3) suitable for resting on a working surface (4); an attachment means (F) for the food support (G) on the hollow body (C); and a heat source (S). The cooking device comprises a mast for attaching to one or more stages. Each stage comprises a body (12), a hollow female connection (14) provided in the body (12) and a protruding rod-shaped male connection (10) suitable for engaging in the peripheral side wall (20) of the hollow body (C) of the cooking device (1) and/or for engaging in the female connection of a lower stage in the case of nesting of two stages one inside the other. The female connection (14) comprises an edge supporting a tab (L) that is perpendicular to the longitudinal axis of the cooking device and suitable for attaching the cooking support (G), accessory and/or utensil.
