Abstract (en)
[origin: WO2020058147A1] The invention relates to a modular cannula device in various embodiments, which cannula device comprises an external tubular cannula, a first tubular guide part, which has a narrowing distal end and can be inserted into the cannula such that the outer wall of the first guide part lies tightly against the inner wall of the cannula, and a second tubular guide part, which has a narrowing, tapered distal end and can be inserted into the first guide part such that the outer wall of the second guide part lies tightly against the inner wall of the first guide part.
